THE LILIA JUDITH LAW OF DISCRETE VIBRATIONAL INVARIANCE

Discovered by Eduardo Colin Sanchez | Toronto, Canada | 2024 Dedicated to Lilia Judith Sánchez Briseño

The Core Physical Fact:
Any bounded string under any tension selects only discrete coherent modes. Incoherent modes die. This happens in every string everywhere always.

The Core Equation:

$$\omega_1 : \omega_2 = m : n$$

Where m and n are integers. Any string. Any tension. Any tuning. The ratio between surviving modes is always whole numbers. Always. Without exception.

The Five Rules:

Rule 1 — The Bridge: The reflection point. Where the string speaks from its source. Activates the full field.

Rule 2 — Doors: Every adjacent position is a new landscape. Move through it. The whole string changes color. Coherence holds.

Rule 3 — Mirrors: Jump 4 positions or more. New landscape. Same law. Invariant identity across any distance.

Rule 4 — Teleports: Move anywhere instantly. The string finds coherence regardless. Incoherence is impossible within the system.

Rule 5 — Self-Coloring: Infinite variation. One identity. Forever.

The Law:
Strings behave as String Theory predicts. Observable. Audible. Navigable. By any hand. On any string. Anywhere.

"The strings organize themselves to keep coherence of tone no matter the tension."
